**Applications: Use on paper, canvas, cardboard, wood, metal, leather & some plastics.**

- Water based
- Acid free & non-toxic
- Dries clear
- Fast drying
- Matt finish
- Excellent holdout

### INSTRUCTIONS

**Step 1:** Apply a generous coat of TripleTac to the surface that you are transferring the image onto. Images printed from a laser printer or patterned paper will give the best results.

**Step 3:** Using a small amount of water, gently rub the back of the paper with a wet finger or cloth, until the paper starts to pill. Continue wetting & rubbing, until the image is revealed. To avoid patchy results, take care not to rub too much in one area.

**Step 2:** Place the image onto the coated surface face-down & allow to dry. (24 hours is recommended)

**Step 4:** Apply a second coat of TripleTac, to seal the image. Allow to dry. (24 hours is recommended). Your TripleTac Canvas is now completed and ready to be displayed.
